

Game Inspirations

I would like your games in this class to be **inspired by arcade games** from the "Golden Age" (1970s to early 1980s). The reason: the scope, art assets, and game idea are generally simpler than more modern games, and I think they lend themselves well to an approximately 5-week project. I would like your game to make its inspiration self-evident. It's OK to make tweaks, especially with the visuals / theme, to some of the more minor aspects, but stay true to the basic gameplay mechanic of the original.

I would also like your games to use **3D models**, but it is OK to have a fixed 2D-like camera perspective if that makes sense to you.

A few pre-approved game inspirations:

- Space Invaders (Midway, 1978)
- Asteroids (Atari 1979)
- Battlezone (Atari 1980)
- Missile Command (Atari 1980)
- Centipede (Atari 1981)
- Defender (Williams 1981)
- Tempest (Atari 1981)
- Zaxxon (Sega 1981)
- Joust (Williams 1982)
- Moon Patrol (Williams 1982)
- Robotron 2084 (Williams 1982)
- 1942 (Capcom 1984)
- (If you want to use another game as inspiration, just ask!)

Your game might not use all of the "essential skills", which is fine. But I do want you to **explore those essential skills** and have enough knowledge about them to use them during the quiz.

You can certainly do the same game for all 3 engines, or do something different for each of the 3 projects. Some advantages of doing the same game:

- No new assets to create!
- Gives you a more apples-to-apples comparison of the 3 engines

By the due date, I'd like you to submit these:

- What game are you using as inspiration?
- What changes (if any) are you making to the basic formula?
- A week-by-week plan of what you'll have finished. Frame these as things that are visually evident.
